TO WHOM IT MAY CONCERN

Aberystwyth University's institute IBERS is engaged in many projects exploring Genotype x Environmental interactions. Based on Scival Metrics on publications we are the leading research group in Europe for Miscanthus related research.

In 2016 the Institute for Ecology of Industrial Areas (IETU) in Katowice analysed soil samples for IBERS from a range of sites. The work was completed on time. We have no reason to doubt the quality of this data because this is an accredited lab with excellent equipment and staff. The high data quality was in part confirmed by low variation between replicate samples. We hope to continue to co-operate with IETU on soil chemical analysis because of the high levels of competence shown.

Prof. John Clifton-Brown
